I've attached my updated animal dev/repro study quality table. There are a few things that need to be filled in yet (yellow blocks), but it is now reformatted to be consistent with the last neurotox version I had. Level of detail may be different though. I won't be at the meeting next week because I'll be at ILSI/HESI. Sue

**Subject:** Formaldehyde ACTION ITEM, re: deadlines are fast approaching (or have already passed)

Hi everyone,

The end of April is fast approaching, and with it so are some critical formaldehyde deadlines (some that many of us agreed to have already passed☺), including the deadline for the hazard section drafts.

With that in mind, Barbara and I are requesting a subset of the materials relevant to the hazard identification section by 4/24/15, namely:

- An updated literature flow diagram that includes the 2014 studies (or the text you intend to use to describe how you found your literature)
- An updated study evaluation table that includes the studies identified in 2014
- An updated hazard identification display, similar to the ones we discussed in team meetings several months ago (i.e., which hazard(s) you intend to identify for you section, and how you arrived at those decisions)

These materials will be necessary for you to meet the 4/30/15 deadline of completed hazard sections, so this will help us to gauge where everyone is before that deadline has passed, and it will help us identify areas in need of work for consistency across sections.

We will be canceling next week's meeting (4/15) due to the BaP SAB review meeting.

Thanks, and please send materials to both Barbara and myself as you complete them. Let's get this giant Sisyphean ball rolling again!

-Andrew and Barbara
